

Interactive Experience Project Plan

Project Details

Project Title	Red or Blue pill
Experience Type	Fiction (inspired by John Wick)

Concept

The setting of the game will start out with you waking up in a burning house. You then later realize its your own home and that it was your best friend that was the one who burned your house down. The choice to be made is whether the user will stick to their morals or give in to the urge to exact their revenge after promising their dead wife that they would never do that again.

Progression

Introduction

The experience is introduced by the user waking up in a burning house and can't remember anything. The player learns that their best friend betrayed them and they are the reason their house is burning. The first decision is to either get out of the house or try to remember who they are.

Development

The major challenges that occur are either the user getting out of the house and whether or not they get revenge on their best friend. If they don't choose to get out of the house they die and if they don't decide to get revenge nothing happens but if they do want revenge they burn down their house and "wonder was it really worth it".

Conclusion

The experience can end by either dying, getting arrested or by reaching the end of the game. The user's choices determine each ending.

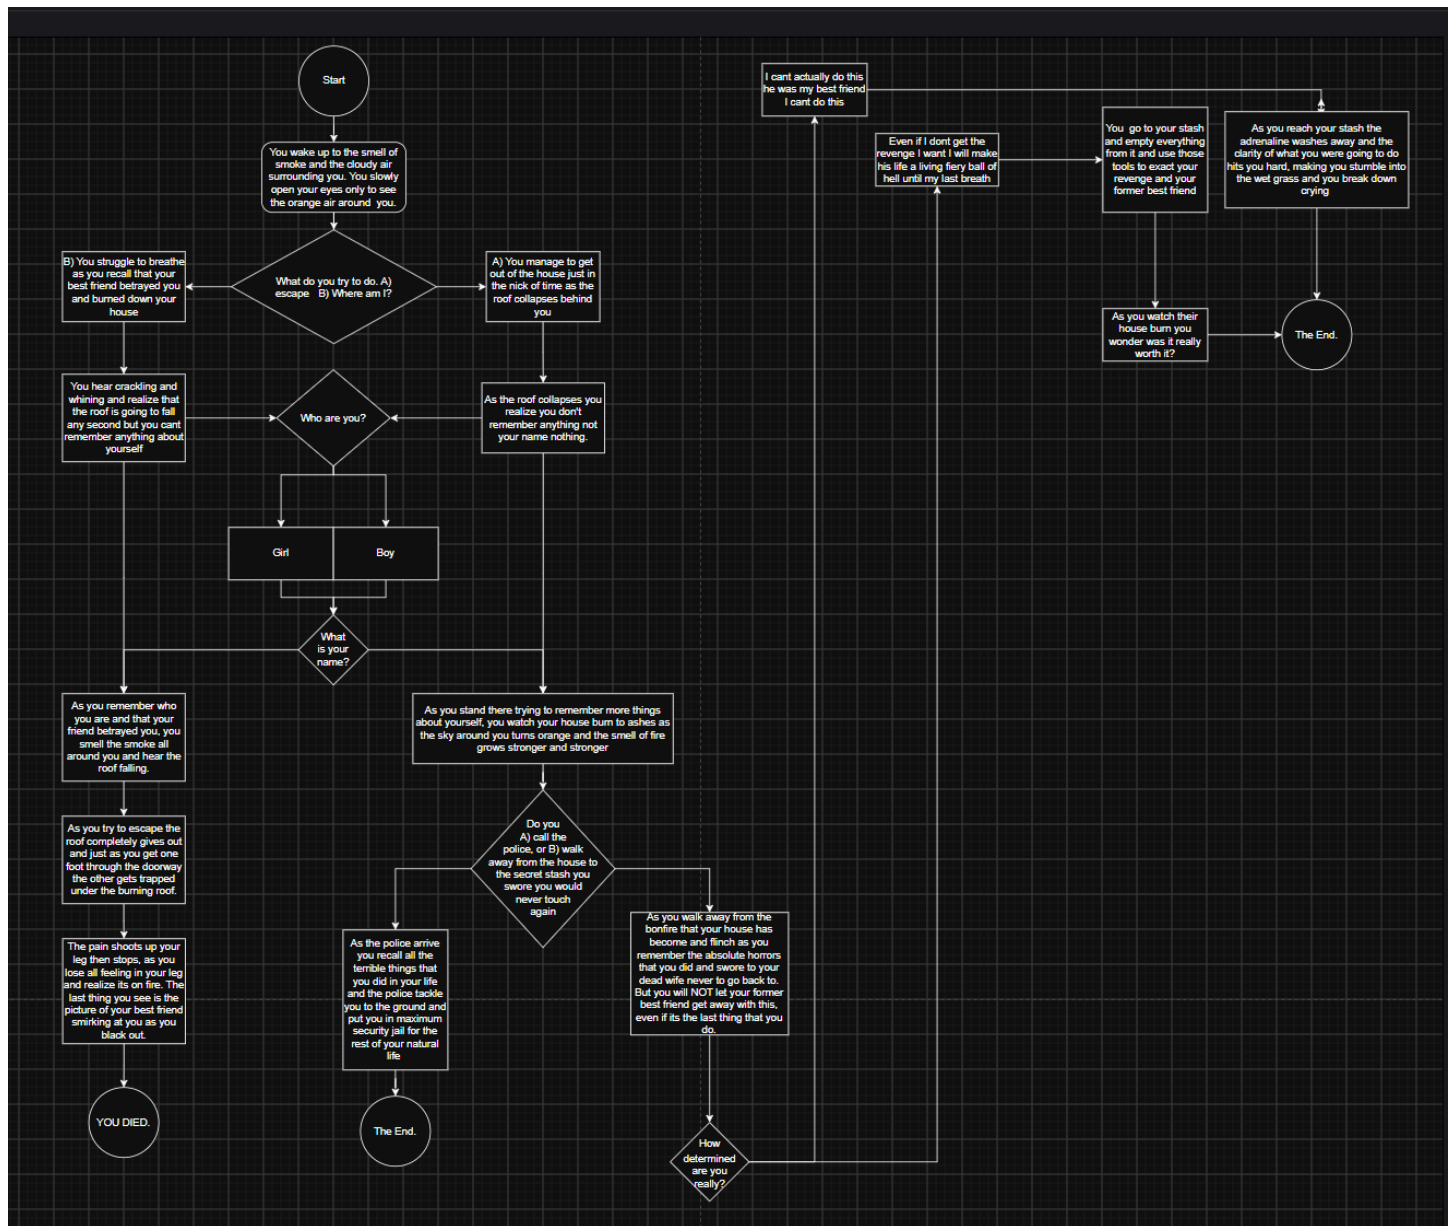

Major Choices

Situation	User Choices	What Happens Next
They wake up in a burning house	Escape Figure out who they are	They either get out of the house or die
Asking who they are	Boy Girl	Asks what their name is
What is your name	Any valid input	They either keep escaping or die
What do they do after they get out of the house	Call the police Go to their stash they swore they would never touch again	They either get arrested and game over or go to the stash
Asks how determined they are	Not determined Very determined	They do nothing and game over or they burn their best friends house and game over

Data to Track

Information	Example Value	Why the Program Needs It
None		

Flow

Minimum Viable Product (MVP)

Check the boxes to confirm that the experience plan would result in a Minimum Viable Product.

- ☒ Introduces the setting, player role, and goal clearly.
- ☒ Accepts and responds to user input.
- ☒ Tracks data or information.
- ☒ Changes what happens based on at least one earlier choice.

- ☒ Includes at least two possible endings.
- ☒ Provides clear instructions and valid choice options.
- ☒ Can be played from beginning to end without getting stuck.

Revisions

Revision Description	How It Improved the Experience
Game wouldn't start at the right spot so I fixed it	It would actually start at the right spot
Updated code so that it fully followed style guidelines	It made it look better and easier to read for the user
